

TEMP-COAT® insulation holds unique thermal insulation, anti-condensate, corrosion protection, waterproofing and sound-proof properties.

Superthin thermal coatings TEMP-COAT® series are the leader on a parity "price-quality"

Superthin thermal coatings of TEMP-COAT® series allow to solve problems of thermal protection and corrosion protection of pipelines in a complex. They considerably simplify operation, maintenance service of pipelines and stop valves. It allows to fast detect places of leaks, fistulas and increase service life of the protected pipelines.

TEMP-COAT® coating are aesthetic, ecologically safe, expenses on preventive and regenerative repair of a thermal protection essentially cut down, they cannot be stolen. Small local damages of coating (scratches) are easily restored by a brush. Superthin thermal coatings TEMP-COAT® series are the leader on a parity "price-quality".

Labour input of applying insulation is commensurable with painting: materials are put by means of a spray, a brush or the platen. Service life of thermal isolation at normal operation more than 15 years. Coating can be easily washes and repaired.
